E1 / E2: hit rate and waiting queue vs time by policy (line = mean over seeds, band = min..max; when trapped, FCFS, LPM-128 and AGING-LPM coincide; FCFS-CAP queue excludes its outer-gate backlog)
E1: 1.25×λmiss, 300 cold sessions at t=0
E1: 1.5×λmiss, 300 cold sessions at t=0
E1: 2×λmiss, 300 cold sessions at t=0
E2: burst of 200 at 2×λmiss
prefix hit rate
waiting queue (1000 s mean)
simulated time (ks)
simulated time (ks)
simulated time (ks)
time since burst start (ks)
FCFS
LPM
LPM-128
AGING-LPM(10 s)
AGING-LPM(30 s)
FCFS-CAP(N*=45, spec)
FCFS-CAP(N*=28, len.-biased)
