(a) speed and tool time enter only as $s\bar{z}$ (T8)
model $\omega(C, s\bar{z})$, 300k pool
A100 measured (turns-based)
A100 measured (sessions/s)
H200 frozen prediction (s=2.742); result not read
window $\omega = \mu_{max}/\mu_b$
$s\,\bar{z}$ (s): mean tool time in A100-equivalent seconds
(b) window against pool size
model, A100 costs, $\bar{z}$ = 5 s
measured (turns-based)
pool sweep frozen prediction; result not read
window ω
KV pool M (thousand tokens)
