(a) speed and tool time enter only as $s\bar{z}$
model $\omega(\mathcal{C}, s\bar{z})$, 300k pool
A100 measured (turns-based)
A100 measured (sessions/s)
H200 frozen prediction (s=2.742)
H200 measured (turns-based; seen before the freeze)
H200 measured (sessions/s)
peak ratio $\omega = \mu_{max}/\mu_b$
$s\bar{z}$ (s): mean tool time in A100-equivalent seconds
(b) peak ratio against pool size
model, A100 costs, $\bar{z}$ = 5 s
measured (turns-based)
pool sweep frozen prediction
peak ratio ω
KV pool M (thousand tokens)
